TASK 3.2 Create order form with validation

Готово: ПросмотретьГотово: Давать ответ на заданиеГотово: Получить оценку

Create Order Form for Bike ordering with custom validation using JS and apply for BIKE SHOP Order page:

- Implement first block **Choose model of bike** with drop-down list (include all bike available on the site) and text area for comment;
- Implement second block **Billing address** which include First Name, Last Name, Street Address, State or Region (drop-down list), Zip, Phone
- Implement third block **Delivery Address**, like a **Billing Address** and include checkbox *same as billing address*;
- Implement forth block **Delivery Date** which include three drop-down list (day, month, year). Important: This block should take into account the following criterion - number of days in connection with month, number of days in February connection with year;
- Implement fifth block **Payment** where you can choose type of Credit Card and include Card number, Expiration, CVV;
- Implement sixth block **Create account?** include three input Username, Password, Confirm Password
- Implement result.html where you can see all data which you filled (after validation approve);

Example of custom form validation:

CARD NUMBER

Required

CARD NUMBER

9876543210

Invalid credit card

CARD NUMBER

378282246310005
